Preface	xix
Basic notation	xxvii
Glossary of main symbols	xxix

## 1. Anisotropic elastic media

<b>1.1 Strain-energy density and stress-strain relations</b>	1
<b>1.2 Dynamical equations</b>	4
1.2.1 Symmetries and transformation properties	6
Symmetry plane of a monoclinic medium	8
Transformation of the stiffness matrix	11
<b>1.3 Kelvin-Christoffel equation, phase velocity and slowness</b>	12
1.3.1 Transversely isotropic media	14
1.3.2 Symmetry planes of an orthorhombic medium	15
1.3.3 Orthogonality of polarizations	17
<b>1.4 Energy balance and energy velocity</b>	18
1.4.1 Group velocity	21
1.4.2 Equivalence between the group and energy velocities	22
1.4.3 Envelope velocity	23
1.4.4 Example: transversely isotropic media	24
1.4.5 Elasticity constants from phase and group velocities	27
1.4.6 Relationship between the slowness and wave surfaces	28
SH-wave propagation	29
<b>1.5 Finely layered media</b>	29
1.5.1 The Schoenberg-Muir averaging theory	34
Examples	35
<b>1.6 Anomalous polarizations</b>	39
1.6.1 Conditions for the existence of anomalous polarization	40
1.6.2 Stability constraints	42
1.6.3 Anomalous polarization in orthorhombic media	44
1.6.4 Anomalous polarization in monoclinic media	44
1.6.5 The polarization	45
1.6.6 Example	46
<b>1.7 The best isotropic approximation</b>	49
<b>1.8 Analytical solutions</b>	52

1.8.1	2-D Green function	52
1.8.2	3-D Green function	54
<b>1.9</b>	<b>Reflection and transmission of plane waves</b>	<b>55</b>
1.9.1	Cross-plane shear waves	57
<b>2.</b>	<b>Viscoelasticity and wave propagation</b>	
<b>2.1</b>	<b>Energy densities and stress-strain relations</b>	<b>64</b>
2.1.1	Fading memory and symmetries of the relaxation tensor	66
<b>2.2</b>	<b>Stress-strain relation for 1-D viscoelastic media</b>	<b>67</b>
2.2.1	Complex modulus and storage and loss moduli	68
2.2.2	Energy and significance of the storage and loss moduli	69
2.2.3	Non-negative work requirements and other conditions	70
2.2.4	Kramers-Kronig relations	72
	Stability and passivity	73
2.2.5	Summary of the main properties	74
	Relaxation function	74
	Complex modulus	74
<b>2.3</b>	<b>Wave propagation in 1-D viscoelastic media</b>	<b>75</b>
2.3.1	Energy balance and related quantities	76
2.3.2	Kramers-Kronig relations for velocity and attenuation	80
	Numerical evaluation	82
2.3.3	Wave propagation for complex frequencies	83
<b>2.4</b>	<b>Mechanical models and wave propagation</b>	<b>84</b>
2.4.1	Maxwell model	86
2.4.2	Kelvin-Voigt model	89
2.4.3	Zener or standard-linear-solid model	91
	The dispersion index	95
2.4.4	Burgers model	95
2.4.5	Generalized Zener model	98
	Nearly constant $Q$	99
2.4.6	Nearly constant- $Q$ model with a continuous spectrum	101
<b>2.5</b>	<b>Constant-<math>Q</math> model and wave equation</b>	<b>102</b>
2.5.1	Phase velocity and attenuation factor	103
2.5.2	Wave equation in differential form. Fractional derivatives	104
	Propagation in Pierre shale	105
<b>2.6</b>	<b>The Cole-Cole model</b>	<b>106</b>
<b>2.7</b>	<b>Equivalence between source and initial conditions</b>	<b>107</b>
<b>2.8</b>	<b>Hysteresis cycles and fatigue</b>	<b>110</b>
<b>2.9</b>	<b>Distributed-order fractional time derivatives</b>	<b>113</b>
2.9.1	The $\beta^n$ case	114
2.9.2	The generalized Dirac comb function	115
<b>2.10</b>	<b>The concept of centrovLOCITY</b>	<b>115</b>
2.10.1	1-D Green function and transient solution	116
2.10.2	Numerical evaluation of the velocities	117
2.10.3	Example	119
<b>2.11</b>	<b>Memory variables and equation of motion</b>	<b>121</b>

2.11.1	Maxwell model	121
2.11.2	Kelvin-Voigt model	123
2.11.3	Zener model	124
2.11.4	Generalized Zener model	125
<b>2.12</b>	<b>Instantaneous frequency and quality factor</b>	<b>127</b>
2.12.1	The instantaneous frequency	127
2.12.2	The instantaneous quality factor	129
2.12.3	Examples	130
	The Mandel signal	130
	Propagation in a lossy homogeneous medium	131
<b>3.</b>	<b>Isotropic anelastic media</b>	
3.1	Stress-strain relations	136
3.2	Equations of motion and dispersion relations	136
3.3	Vector plane waves	139
3.3.1	Slowness, phase velocity, and attenuation factor	139
3.3.2	Particle motion of the P wave	141
3.3.3	Particle motion of the S waves	143
3.3.4	Polarization and orthogonality	145
3.4	Energy balance, velocity and quality factor	146
3.4.1	P wave	147
3.4.2	S waves	154
3.4.3	Expression relating different quality factors	155
3.5	Boundary conditions and Snell law	155
3.6	The correspondence principle	157
3.7	Rayleigh waves	158
3.7.1	Dispersion relation	159
3.7.2	Displacement field	160
3.7.3	Phase velocity and attenuation factor	161
3.7.4	Special viscoelastic solids	162
	Incompressible solid	162
	Poisson solid	162
	Hardtwig solid	163
3.7.5	Two Rayleigh waves	163
3.8	Reflection and transmission of SH waves	164
3.9	Memory variables and equation of motion	167
3.10	Analytical solutions	169
3.10.1	Viscoacoustic media	169
3.10.2	Constant- $Q$ viscoacoustic media	171
3.10.3	Viscoelastic media	172
3.10.4	Pekeris solution for Lamb problem	174
3.11	Constant- $Q$ P- and S-waves	175
3.11.1	Time fractional derivatives	175
3.11.2	Spatial fractional derivatives	176
3.12	Wave equations based on the Burgers model	177
3.12.1	Propagation of P-SV waves	178

3.12.2	Propagation of SH waves	178
<b>3.13</b>	<b>P-SV wave equation based on the Cole-Cole model</b>	<b>179</b>
<b>3.14</b>	<b>The elastodynamic of a non-ideal interface</b>	<b>181</b>
3.14.1	The interface model	181
	Boundary conditions in differential form	182
3.14.2	Reflection and transmission coefficients of SH waves	183
	Energy loss	184
3.14.3	Reflection and transmission coefficients of P-SV waves	185
	Energy loss	187
	Examples	188
<b>3.15</b>	<b>SH-wave transfer function</b>	<b>190</b>
<b>4.</b>	<b>Anisotropic anelastic media</b>	
<b>4.1</b>	<b>Stress-strain relations</b>	<b>196</b>
4.1.1	Model 1: effective anisotropy	198
4.1.2	Model 2: attenuation via eigenstrains	199
4.1.3	Model 3: attenuation via mean and deviatoric stresses	202
<b>4.2</b>	<b>Fracture-induced anisotropic attenuation</b>	<b>203</b>
4.2.1	The equivalent monoclinic medium	205
4.2.2	The orthorhombic equivalent medium	206
4.2.3	HTI equivalent media	208
<b>4.3</b>	<b>Stiffness tensor from oscillatory experiments</b>	<b>210</b>
<b>4.4</b>	<b>Wave velocities, slowness and attenuation vector</b>	<b>213</b>
<b>4.5</b>	<b>Energy balance and fundamental relations</b>	<b>215</b>
4.5.1	Plane waves. Energy velocity and quality factor	218
4.5.2	Polarizations	223
<b>4.6</b>	<b>Propagation of SH waves</b>	<b>224</b>
4.6.1	Energy velocity	224
4.6.2	Group velocity	226
4.6.3	Envelope velocity	227
4.6.4	Perpendicularity properties	227
4.6.5	Numerical evaluation of the energy velocity	229
4.6.6	Forbidden directions of propagation	231
<b>4.7</b>	<b>Wave propagation in symmetry planes</b>	<b>232</b>
4.7.1	Properties of the homogeneous wave	235
4.7.2	Propagation, attenuation and energy directions	235
4.7.3	Phase velocities and attenuations	236
4.7.4	Energy balance, velocity and quality factor	236
4.7.5	Explicit equations in symmetry planes	238
<b>4.8</b>	<b>Summary of plane-wave equations</b>	<b>241</b>
4.8.1	SH wave	241
	Elastic anisotropic medium	241
	Anelastic anisotropic medium. Homogeneous waves	242
	Anelastic anisotropic medium. Inhomogeneous waves	242
4.8.2	qP-qS waves	243
	Anelastic anisotropic medium. Homogeneous waves	243

	Anelastic anisotropic medium. Inhomogeneous waves	244
<b>4.9</b>	<b>Memory variables and equation of motion</b>	245
4.9.1	Strain memory variables	246
4.9.2	Memory-variable equations	248
4.9.3	SH equation of motion	249
4.9.4	qP-qSV equation of motion	249
<b>4.10</b>	<b>Fermat principle and its relation to Snell law</b>	251
<b>4.11</b>	<b>Analytical transient solution for SH waves</b>	255
<b>5.</b>	<b>The reciprocity principle</b>	
5.1	Sources, receivers and reciprocity	260
5.2	The reciprocity principle	261
5.3	Reciprocity of particle velocity. Monopoles	262
5.4	Reciprocity of strain	263
5.4.1	Single couples	263
	Single couples without moment	265
	Single couples with moment	265
5.4.2	Double couples	265
	Double couple without moment. Dilatation	265
	Double couple without moment and monopole force	266
	Double couple without moment and single couple	267
5.5	Reciprocity of stress	268
5.6	Reciprocity principle for flexural waves	270
5.6.1	Equation of motion	270
5.6.2	Reciprocity of the deflection	271
5.6.3	Reciprocity of the bending moment	274
<b>6.</b>	<b>Reflection and transmission coefficients</b>	
6.1	Reflection and transmission of SH waves	276
6.1.1	Symmetry plane of a homogeneous monoclinic medium	276
6.1.2	Complex stiffnesses	278
6.1.3	Reflection and transmission coefficients	280
6.1.4	Propagation, attenuation and energy directions	282
6.1.5	Brewster and critical angles	289
6.1.6	Phase velocities and attenuations	294
6.1.7	Energy-flux balance	296
6.1.8	Energy velocities and quality factors	297
6.1.9	The physical solution in ray-tracing algorithms	300
6.2	Reflection and transmission of qP-qSV waves	302
6.2.1	Phase velocities and attenuations	304
6.2.2	Energy-flow balance	304
6.2.3	Reflection of seismic waves	306
6.2.4	Incident inhomogeneous waves	315
	Generation of inhomogeneous waves	316
	Ocean bottom	317
6.3	Interfaces separating a solid and a fluid	319

6.3.1	Solid/fluid interface	319
6.3.2	Fluid/solid interface	321
6.3.3	The Rayleigh window	322
6.4	Scattering coefficients of a set of layers	323
<b>7.</b>	<b>Biot theory for porous media</b>	
7.1	<b>Isotropic media. Stress-strain relations</b>	331
7.1.1	Jacketed compressibility test	332
7.1.2	Unjacketed compressibility test	333
7.2	<b>Gassmann equation and effective stress</b>	334
7.2.1	Effective stress in seismic exploration	337
	Pore-volume balance	339
	Acoustic properties	341
7.2.2	Analysis in terms of compressibilities	342
7.3	<b>Pore-pressure build-up in source rocks</b>	346
7.4	<b>The asperity-deformation model</b>	348
7.5	<b>Anisotropic media. Stress-strain relations</b>	353
7.5.1	Effective-stress law for anisotropic media	357
7.5.2	Summary of equations	359
	Pore pressure	359
	Total stress	359
	Effective stress	359
	Skempton relation	360
	Undrained-modulus matrix	360
7.5.3	Brown and Korringa equations	360
	Transversely isotropic medium	360
7.6	<b>Kinetic energy</b>	361
7.6.1	Anisotropic media	364
7.7	<b>Dissipation potential</b>	367
7.7.1	Anisotropic media	368
7.8	<b>Lagrange equations and equation of motion</b>	369
7.8.1	The viscodynamic operator	370
7.8.2	Fluid flow in a plane slit	371
7.8.3	Anisotropic media	377
7.9	<b>Plane-wave analysis</b>	378
7.9.1	Compressional waves	378
	Relation with Terzaghi law and the second P wave	382
	The diffusive slow mode	383
7.9.2	The shear wave	384
7.10	<b>Strain energy for inhomogeneous porosity</b>	387
7.10.1	Complementary energy theorem	388
7.10.2	Volume-averaging method	390
7.11	<b>Boundary conditions</b>	393
7.11.1	Interface between two porous media	394
	Deresiewicz and Skalak's derivation	394
	Gurevich and Schoenberg's derivation	397

7.11.2	Interface between a porous medium and a viscoelastic medium	399
7.11.3	Interface between a porous medium and a viscoacoustic medium	399
7.11.4	Free surface of a porous medium	399
<b>7.12</b>	<b>Reflection and transmission coefficients</b>	400
<b>7.13</b>	<b>Extension of Biot theory to a composite frame</b>	403
7.13.1	Strain-energy density	404
7.13.2	Example: frozen porous media	407
	Stress-strain relations	408
	Conservation of momentum	409
	Phase velocity and attenuation factor	411
<b>7.14</b>	<b>Extension of Biot theory to partial saturation</b>	413
7.14.1	Conservation of momentum	413
7.14.2	Stress-strain relations	414
7.14.3	Phase velocity and attenuation factor	415
<b>7.15</b>	<b>Squirt-flow dissipation</b>	416
<b>7.16</b>	<b>The mesoscopic-loss mechanism. White model</b>	420
<b>7.17</b>	<b>The Biot-Gardner effect</b>	427
7.17.1	Radial effect	428
7.17.2	Axial effect	428
<b>7.18</b>	<b>Green function for poro-viscoacoustic media</b>	430
7.18.1	Field equations	431
7.18.2	The solution	432
<b>7.19</b>	<b>Green function for a fluid/solid interface</b>	436
<b>7.20</b>	<b>Poro-viscoelasticity</b>	440
<b>7.21</b>	<b>Bounds and averages on velocity and quality factor</b>	444
7.21.1	Stiffness bounds	445
7.21.2	Stiffness averages	446
<b>7.22</b>	<b>Anelasticity models based on ellipsoidal pores</b>	449
<b>7.23</b>	<b>Effect of melt on wave propagation</b>	452
7.23.1	Arrhenius viscosity related to grain-boundary relaxation	453
7.23.2	Stress-strain relations and wave properties	453
	Walsh model	454
	CPA model	454
<b>7.24</b>	<b>Anisotropy and poro-viscoelasticity</b>	458
7.24.1	Stress-strain relations	459
7.24.2	Biot-Euler equation	461
7.24.3	Time-harmonic fields	461
7.24.4	Inhomogeneous plane waves	464
7.24.5	Homogeneous plane waves	467
7.24.6	Wave propagation in femoral bone	469
<b>7.25</b>	<b>Gassmann equation for a solid pore infill</b>	473
<b>7.26</b>	<b>Mesoscopic loss in layered and fractured media</b>	476
7.26.1	Effective fractured medium	478
<b>7.27</b>	<b>Fluid-pressure diffusion</b>	480
7.27.1	Solution to the linear diffusion equation	481

7.27.2	Solutions to the non-linear diffusion equation	483
	Non-linear pressure equation	484
	Solution for radial horizontal flow and constant mass injection	485
	Solution in spherical coordinates and constant pressure injection	487
	Triggering front	491
7.27.3	Biot classical equation with fractional derivatives	493
	Frequency-wavenumber domain analysis	495
<b>7.28</b>	<b>Thermo-poroelasticity</b>	<b>499</b>
7.28.1	Equations of motion	501
7.28.2	Plane-wave analysis	501
7.28.3	Example	504
7.28.4	Kjartansson model	506
<b>8.</b>	<b>The acoustic-electromagnetic analogy</b>	
<b>8.1</b>	<b>Maxwell equations</b>	<b>516</b>
<b>8.2</b>	<b>The acoustic-electromagnetic analogy</b>	<b>517</b>
8.2.1	Kinematics and energy considerations	523
<b>8.3</b>	<b>A viscoelastic form of the electromagnetic energy</b>	<b>525</b>
8.3.1	Umov-Poynting theorem for harmonic fields	525
8.3.2	Umov-Poynting theorem for transient fields	527
	The Debye-Zener analogy	531
	The Cole-Cole model	536
<b>8.4</b>	<b>The analogy for reflection and transmission</b>	<b>537</b>
8.4.1	Reflection and refraction coefficients	538
	Propagation, attenuation and ray angles	539
	Energy-flux balance	539
8.4.2	Application of the analogy	540
	Refraction index and Fresnel formulae	540
	Brewster (polarizing) angle	541
	Critical angle. Total reflection	543
	Reflectivity and transmissivity	545
	Dual fields	546
	Sound waves	546
8.4.3	The analogy between TM and TE waves	548
	Green analogies	549
8.4.4	Brief historical review	553
<b>8.5</b>	<b>The layer problem</b>	<b>554</b>
8.5.1	TM-SH-TE analogy	558
8.5.2	Analogy with quantum mechanics. The tunnel effect	558
8.5.3	SH-TM analogy for two layers. Magnetotellurics	559
	Surface impedance and apparent viscosity	563
	Surface impedance and apparent resistivity	564
	Example	565
<b>8.6</b>	<b>3-D electromagnetic theory and the analogy</b>	<b>567</b>
8.6.1	The form of the tensor components	568

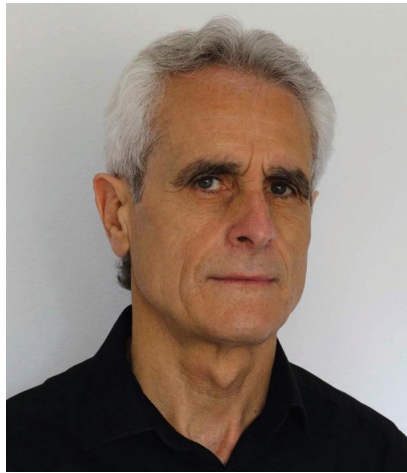

8.6.2	Electromagnetic equations in differential form	569
<b>8.7</b>	<b>Plane-wave theory</b>	571
8.7.1	Slowness, phase velocity and attenuation	573
8.7.2	Energy velocity and quality factor	575
<b>8.8</b>	<b>Electromagnetic diffusion in anisotropic media</b>	579
8.8.1	Differential equations	579
8.8.2	Dispersion relation	581
8.8.3	Slowness, kinematic velocities, attenuation and skin depth	581
8.8.4	Umov-Poynting theorem and energy velocity	582
8.8.5	Fundamental relations	584
<b>8.9</b>	<b>Analytical solution for anisotropic media</b>	584
8.9.1	The solution	587
<b>8.10</b>	<b>Elastic medium with Fresnel wave surface</b>	588
8.10.1	Fresnel wave surface	588
8.10.2	Equivalent elastic medium	590
<b>8.11</b>	<b>Finely layered media</b>	591
<b>8.12</b>	<b>The time-average and CRIM equations</b>	594
<b>8.13</b>	<b>Kramers-Kronig relations</b>	595
<b>8.14</b>	<b>The reciprocity principle</b>	601
<b>8.15</b>	<b>Babinet principle</b>	602
<b>8.16</b>	<b>Alford rotation</b>	603
<b>8.17</b>	<b>Cross-property relations</b>	606
<b>8.18</b>	<b>Poroacoustic and electromagnetic diffusion</b>	608
8.18.1	Poroacoustic equations	608
8.18.2	Electromagnetic equations	609
	The TM and TE equations	610
	Phase velocity, attenuation factor and skin depth	610
	Analytical solutions	611
<b>8.19</b>	<b>Electro-seismic wave theory</b>	612
<b>8.20</b>	<b>Gravitational waves</b>	614
<b>9.</b>	<b>Numerical methods</b>	
<b>9.1</b>	<b>Equation of motion</b>	617
<b>9.2</b>	<b>Time integration</b>	619
9.2.1	Classical finite differences	620
9.2.2	Splitting methods	622
9.2.3	Predictor-corrector methods	622
	The Runge-Kutta method	623
9.2.4	Fractional calculus	623
9.2.5	Spectral methods	624
9.2.6	Algorithms for finite-element methods	625
<b>9.3</b>	<b>Calculation of spatial derivatives</b>	626
9.3.1	Finite differences	626
9.3.2	Pseudospectral methods	629
9.3.3	The finite-element method	631
<b>9.4</b>	<b>Source implementation</b>	632

9.5	Boundary conditions	634
9.6	Absorbing boundaries	635
9.7	Model and modeling design. Seismic modeling	637
9.8	Concluding remarks	640
9.9	Appendix	641
9.9.1	Fractional calculus	641
	Grünwald-Letnikov and central-difference approximations	642
	Euler scheme	643
	CL method	644
	GMMP method	644
	Adams-Bashforth-Moulton scheme	644
	Discretization of the 2-D P-SV Cole-Cole wave equation	651
9.9.2	Electromagnetic-diffusion code	653
9.9.3	Finite-differences code for SH waves	658
9.9.4	Finite-difference code for SH (TM) waves	663
9.9.5	Pseudospectral Fourier method	671
	Calculation of fractional derivatives	675
9.9.6	Pseudospectral Chebyshev method	675
9.9.7	Pseudospectral sine/cosine method	678
9.9.8	Earthquake sources. The moment-tensor	680
9.9.9	3-D anisotropic media. Free-surface boundary treatment	682
9.9.10	Modeling in cylindrical coordinates	685
	Equations for axis-symmetric single-phase media	685
	Equations for poroelastic media	687
	Examinations	689
	Chronology of main discoveries	695
	Leonardo's manuscripts	711
	A list of scientists	717
	Bibliography	729
	Name index	763
	Subject index	781

# About the author

José M. Carcione was born in Buenos Aires, Argentina. He received the degree “Licenciado in Ciencias Físicas” from Buenos Aires University in 1978, the degree “Dottore in Fisica” from Milan University in 1984, and the Ph.D. in Geophysics from Tel-Aviv University in 1987. That year he was awarded the Alexander von Humboldt scholarship for a position at the Geophysical Institute of Hamburg University, where he stayed from 1987 to 1989. From 1978 to 1980, he worked at the “Comisión Nacional de Energía Atómica” at Buenos Aires. From 1981 to 1987, he worked for “Yacimientos

Petrolíferos Fiscales”, the national oil company of Argentina. He received the 2007 EAGE Anstey award in London and the 2017 EAGE Conrad Schlumberger award in Paris. Presently, he is associated with Hohai University (Nanjing, China) and OGS (Trieste, Italy). His current research deals with the theory of wave propagation in acoustic and electromagnetic media, numerical modeling and their application to geophysical problems. See an extended biography in [https://wiki.seg.org/wiki/José\\_M.\\_Carcione](https://wiki.seg.org/wiki/José_M._Carcione).
